

ABSTRACT ALGEBRA

David S. Dummit & Richard M. Foote (3rd Edition)

Complete Syllabus-Extracted Chapters & Interactive Table of Contents

Interactive Navigation Guide: Click on any section title or page number below to jump directly to that topic in this textbook extract. Every section is indexed precisely to match the 5 units of the abstract algebra curriculum.

Unit I: Groups, Subgroups, Cosets, and Lagrange's Theorem (15 Teaching Hrs)

Syllabus: Homomorphisms, Isomorphisms, Subgroups, Center, Subgroup Generated by a Subset, Cosets, Lagrange's Theorem (Euler, Fermat, Wilson Theorems).

Section 1.6	Homomorphisms and Isomorphisms	Page 4
Section 2.1	Subgroups: Definition, Examples, and Criteria	Page 9
Section 2.2	Centralizers, Normalizers, Stabilizers, and Kernels	Page 12
Section 2.3	Cyclic Groups and Cyclic Subgroups	Page 18
Section 2.4	Subgroups Generated by Subsets of a Group	Page 19
Section 2.5	The Lattice of Subgroups of a Group	Page 24
Section 3.2	Cosets, Equivalence Relations, and Lagrange's Theorem (Number Theory Applications)	Page 29

Unit II: Quotients, Isomorphism Theorems, and Direct Products (15 Teaching Hrs)

Syllabus: Direct Products, Normal Subgroups, Quotient Groups, Fundamental Homomorphism Theorem, 1st & 2nd Isomorphism Theorems, Commutators and Abelianization.

Section 5.1	Direct Products: Definition, Order of Elements, Classification	Page 37
Section 3.1	Normal Subgroups and Quotient Groups (Definitions and Criteria)	Page 44
Section 3.2	Cosets and Quotient Group Multiplications	Page 60
Section 3.3	The Four Isomorphism Theorems (1st, 2nd Diamond, 3rd, and Lattice Theorems)	Page 61
Section 5.4	Recognizing Direct Products, Commutator Subgroups, and Abelianization	Page 66

Unit III: Symmetric and Alternating Groups (15 Teaching Hrs)

Syllabus: Symmetric Group, Cycles, Transpositions, Even/Odd Permutations, Alternating Group, Simplicity of A_n ($n \geq 5$), Normal Subgroups of S_n .

Section 3.5 Transpositions, Signature Homomorphism, and the Alternating Group A_n Page 79

Section 4.6 The Simplicity of A_n ($n \geq 5$) and Classification of Normal Subgroups of S_n Page 85

Unit IV: Group Actions, Class Equation, and Ring Theory Basics (15 Teaching Hrs)

Syllabus: Group Actions (Regular & Conjugation), Orbits, Isotropy (Stabilizer), Class Equation, Conjugacy Classes, Groups of Order p^2 , Rings, Subrings, Gaussian Integers, Matrix Rings, Quaternions, Ideals, Quotient Rings, Homomorphisms.

Section 4.1 Group Actions and Permutation Representations (Orbits & Stabilizers) ...Page 94

Section 4.2 Groups Acting on Themselves by Left Multiplication (Cayley's Theorem) Page 100

Section 4.3 Groups Acting on Themselves by Conjugation (Conjugacy & Class Equation) Page 105

Section 7.1 Introduction to Rings: Definitions, Axioms, and Elementary Properties . Page 118

Section 7.2 Concrete Examples: Gaussian Integers $\mathbb{Z}[i]$, Matrix Rings, Quaternions $\mathbb{H}$ Page 128

Section 7.3 Ring Homomorphisms, Quotient Rings, and First Ring Isomorphism Theorem Page 135

Section 7.4 Properties of Ideals: Prime Ideals, Maximal Ideals, and Field Criteria ...Page 148

Unit V: Domains, Fractions, Polynomials, and Real Algebras (15 Teaching Hrs)

Syllabus: Integral Domains, Division Rings, Commutative Rings and Fields, Field of Fractions, Polynomial Rings, Division Algorithm, Ideals of $F[x]$, Algebras of Reals, Complex Numbers, Quaternions and Octonions.

Section 7.5 Rings of Fractions and the Field of Fractions $\text{Frac}(D)$ Page 158

Section 8.1 Euclidean Domains, Norms, and the Division AlgorithmPage 165

Section 8.2 Principal Ideal Domains (P.I.D.s) and Prime Ideals in DomainsPage 174

Section 9.1 Polynomial Rings: Definitions, Degrees, and Basic PropertiesPage 180

Section 9.2 Polynomial Rings over Fields (Division Algorithm & Irreducibility Criteria) .Page 184
